MEMORANDUM

SUBJECT: Emergency RCRA Permit to McDonnell Douglas Corp.

FROM: Michael Sanderson *MSS*
Chief, RCRA Branch
Waste Management Division

TO: David A. Wagoner
Director, Waste Management Division

An Emergency RCRA Permit was issued to McDonnell Douglas Corporation on August 23, 1985, to remove, transport, and thermally treat explosive wastes in storage at the facility. The Permit expired on October 10, 1985.

The facility experienced contractual problems with GSX Services, Inc., the contractor hired to perform the services. On October 8, McDonnell Douglas requested that the Permit be extended and that 89 additional pounds of explosive materials be included in the Permit. At that time, the contractual problems had not been resolved.

In a telephone conversation with Joe Galbraith on November 25, 1985, the facility reported that McDonnell Douglas and GSX Services were in agreement and were ready to begin the removal of the explosive wastes. Attached is a modification to the Emergency Permit by which the Permit will be extended for 90 days from the original expiration date.

The State of Missouri is in agreement with this action and will issue a separate order to the facility.

A notice of this modification to the original Permit will be published in the same newspapers that originally carried the Public Notice on the original Permit.

I recommend you approve the modification.
